

BRICK & CONCRETE REPAIRS

Brick & Concrete Repairs:

Tempo-PCE has extensive experience in repairing major brick and concrete structures, using temporary works to keep road and rail tracks operating normally.

Projects can be from within a confined space using temporary works to allow a safe working environment. Or off rafts, over a watercourse replacing blown concrete to beams.

Where sites require weep holes, a filter can be fitted to stop washout of microfines.

Typical Applications:

- Emergency Tunnel Repairs
- Confined Spaces
- Coring
- Standard Brick Repairs

Key Benefits:

- >> Can be carried out separately, or in conjunction with injection work
- >> Use of temporary works allows working under live traffic

Past Projects:

- Kingsway Service Tunnel, Camden Council
- Talacre Lighthouse, Flintshire
- Summersby Bridge, Surrey Council
- Northumberland Avenue, FM Conways
- Ladywell Bridge, Lewisham Council

Previous Site Environments:

- Confined space
- Over a water course with EA approval
- Listed structures
- Unrestricted traffic
- In conjunction with other injected materials
